# PHANTOM 3 

## ADVANCED

Quick Start Guide V1.0

## Phantom 3 Advanced

It's time to meet your Phantom.
The Phantom 3 Advanced's camera records video at up to 1080p/60fps and captures 12 megapixel photos.
Review the diagram below for a full list of your Phantom 3 Advanced's parts:

| 1. Gimbal and Camera | 8. Aircraft Status Indicators |
| :--- | :--- |
| 2. Vision Positioning System | 9. Antennas |
| 3. Camera Micro-SD Card Slot | 10. Intelligent Flight Battery |
| 4. Aircraft Micro-USB Port | 11. Power Button |
| 5. Front LEDs | 12. Battery Level Indicators |
| 6. Motors | 13. Link Button |
| 7. Propellers | 14. Camera Micro-USB Port |

8. Aircraft Status Indicators
9. Intelligent Flight Battery
10. Power Button
11. Battery Level Indicators
12. Camera Micro-USB Port

## Remote Controller

This powerful Remote Controller allows you to pilot and maneuver your Phantom 3 Advanced at distances over 6,000 feet $(2 \mathrm{~km})^{*}$ away, while putting selected camera controls at your fingertips.

Built into your Remote Controller is a rechargeable LiPo battery and DJI Lightbridge, which when paired with a compatible mobile device gives you a live HD view from the Phantom's camera.

Folded
11. Gimbal Dial
12. Camera Settings Dial
13. Video Recording Button
14. Flight Mode Switch
15. Shutter Button
16. Playback Button
17. C1/C2 Buttons (Customizable)
18. USB Port
19. Micro-USB Port

1. Power Button
2. Return to Home (RTH) Button
3. Control Sticks
4. Status LED
5. Battery Level LEDs
6. Power Port
7. Mobile Device Holder
8. Small Device Positioning Tabs (such as mobile phone)
9. Antennas
10. Handle Bar

## Fly Safe

DJI encourages you to enjoy flying your Phantom 3 Advanced in a safe, responsible, and smart way. To do this, it is important to understand some basic flight guidelines, both for your protection and for the safety of those around you.

1. Fly in Open Areas: Always fly in locations that are free and clear of buildings, trees, power lines, and other obstacles. Do not fly above or near people or animals.
2. Maintain Control at All Times: Even when using DJI autopilot functions such as Auto-Takeoff, Auto-Landing, and Auto-Return to Home, always keep your hands on the Remote Controller and maintain control of your aircraft when it is in flight.
3. Maintain Line of Sight: Keep your aircraft in sight at all times, and avoid flying behind buildings or other obstacles that may block your view.
4. Monitor Your Altitude: For the safety of full-sized aircraft and other air traffic, always fly at altitudes less than 400 feet (120 meters) above ground level, or in line with your local laws and regulations.

Visit http://flysafe.dji.com/no-fly for more information on critical safety features such as No-Fly Zones.

- Calibrating the Compass:

Make sure to calibrate the compass at every new flight location. The compass is very sensitive to electromagnetic interference, which can cause abnormal compass data, leading to poor flight performance or even failure. Regular calibration is required for optimal performance.

1. DO NOT calibrate your compass where there is a chance of strong magnetic interference, such as magnetite, parking structures, and steel reinforcements underground.
2. DO NOT carry ferromagnetic materials with you during calibration such as keys or cellular phones.
3. DO NOT calibrate beside massive metal objects.
4. If the Aircraft Status Indicators are showing solid red, then try to calibrate again. If they are blinking red and yellow alternately after placing the aircraft on the ground, the compass has detected magnetic interference. Change your location.

## - Environmental Considerations:

1. Do not fly in severe weather conditions. This includes high winds (speeds of 22 mph or $10 \mathrm{~m} / \mathrm{s}$ or more), snow, rain, and fog.
2. Only fly in open areas. Tall buildings and steel structures may affect the accuracy of the on-board compass and GPS signal.
3. Avoid obstacles, crowds, high-voltage power lines, trees, and bodies of water.
4. Minimize electromagnetic interference by avoiding areas with high levels of electromagnetism, including mobile phone base stations, radio transmission towers, or Wi-Fi hotspots.
5. Aircraft and battery performance are subject to environmental factors such as air density and temperature. Be very careful when flying 19,600 feet ( 6 km ) or more above sea level, as battery and aircraft performance may not be at peak efficiency.
6. The Phantom 3 Advanced cannot operate in P Mode or use GPS at polar latitudes. Only ATTI Mode and the Vision Positioning system will be operational.

- P Mode:

In this mode, the Phantom 3 Advanced can use GPS and the Vision Positioning system, allowing it to hover accurately in position indoors and out. When GPS is available, a Home Point will be locked so that the Phantom 3 Advanced can Return to Home if the Remote Controller signal is lost.

To enable P Mode, toggle the Flight Mode Switch to the P position.

There are three states in P mode:
P-GPS: GPS works best when outdoors and in a wide open area. Your Phantom 3 Advanced uses GPS to hover in place when there is a strong GPS signal.
P-OPTI: If GPS is not available, the aircraft can use the Vision Positioning system to hover accurately.
P-ATTI: Neither GPS nor the Vision Positioning system are available. The aircraft will only use its barometer for altitude and other on-board sensors for attitude stabilization.
Note that the Vision Positioning system may not work properly when the Phantom 3 Advanced is flying over water, over surfaces without a clear pattern, or in a low-light environment.

## - Return to Home:

When there is a strong GPS signal, the aircraft will be able to record a Home Point and return to that Home Point when required. The Home Point location is recorded when the GPS signal icon in the DJI Pilot app is either yellow or green.
The aircraft will return to the Home Point automatically in the following scenarios (all require a strong GPS signal):
Smart RTH: When the RTH button on the Remote Controller or in the DJI Pilot app is pressed.
Low-Battery RTH: A notification will appear in the DJI Pilot app requesting the pilot to take action when the battery level falls under a certain level.
Failsafe RTH: When the Remote Controller's signal is lost.

- While returning to the Home Point, the aircraft's altitude can be adjusted to avoid obstacles. Tall buildings may affect the Remote Controller's signal. The Failsafe Return to Home procedure will be triggered if the signal is lost. Be sure to fly higher than any nearby buildings to avoid crashing.

## Preparing Your Phantom 3 Advanced Before Flying

Read the User Manual and watch the video tutorials in the DJI Pilot app or on the official DJI website (www.dji.com), and read the following documents included in the box before using your Phantom 3 Advanced for the first time: Phantom 3 Advanced Quick Start Guide, Phantom 3 Professional / Advanced Safety Guidelines and Disclaimer, Phantom 3 Professional / Advanced Intelligent Flight Battery Safety Guidelines, In the Box.

## 1. Download the DJI Pilot App

Search 'DJI Pilot' on the App Store or Google Play and download the DJI Pilot app to your mobile device.

DJI Pilot app

## 2. Watch the Tutorial Videos

Watch the tutorial videos on www.dji.com or in the DJI Pilot app.

Phantom 3 tutorial videos

- For the best experience, use a mobile device that runs iOS 8.0 or above or Android 4.1.2 or above.

## 3. Check Battery Levels

Pressing the Power Button once on either your Intelligent Flight Battery or Remote Controller displays the battery level.
Be sure to fully charge both batteries before your first flight.

## 4. Charging the Batteries

- Only use the official DJI Phantom 3 Advanced charger. Remove the Intelligent Flight Battery from the aircraft before charging.
- It is recommended that you turn off the Intelligent Flight Battery or Remote Controller before charging.
- Connect the charger to a suitable power source $(100-240 \mathrm{~V} 50 / 60 \mathrm{~Hz})$.
- Connect the charger to the Intelligent Flight Battery or Remote Controller. The LEDs will display the current charge level, and when fully charged, they will automatically turn off.

Remove the Intelligent Flight Battery

## 5. Preparing the Remote Controller

Tilt the Mobile Device Holder to the desired position, and then adjust the antennas as shown. The strength of the Remote Controller's signal will fluctuate depending on the positions of the antennas.

The transmission signal between the aircraft and Remote Controller will be strongest within the range illustrated here. If the signal is weak, adjust the positions of the antennas and fly the aircraft closer to achieve optimal signal performance.

- To avoid signal interference, do not use other 2.4 GHz devices when flying.

## 6. Flight Controls

Here are the default flight controls (Mode 2). The left stick controls altitude and rotation, while the right stick controls the forward, backward, left or right movements. The gimbal dial controls the camera's tilt.

Left Stick

Right Stick

Gimbal Dial

## 7. Getting Ready for Takeoff

Remove the gimbal clamp as shown on the right. Place your Phantom 3 Advanced on a flat surface, in an open space, with the nose facing away from you. Then follow the steps below in this order:
Toggle the Flight Mode Switch on your Remote Controller to the right ( P Mode). P Mode is Positioning Mode, A Mode is ATTI Mode, and F Mode is Function Mode.Turn on the Remote Controller by pressing the power button once, releasing it, and then pressing and holding for 2 seconds.
(3) Insert the Intelligent Flight Battery into your Phantom 3 Advanced. Turn on the battery by pressing the power button once, releasing it, and then pressing and holding for 2 seconds.
(4) Ensure the LED on your Remote Controller is green, indicating it is ready to be used.
(5) Connect your mobile device to the Remote Controller with a USB cable and launch the DJI Pilot app. Follow the instructions within the app.
(6) In the app, tap 'Camera'. Ensure your Phantom 3 Advanced is ready to fly by completing the on-screen Checklist. Beginner Mode is enabled by default when you launch the DJI Pilot app for the first time. The aircraft's altitude and flight distance are restricted when flying in Beginner Mode. You can disable Beginner Mode in the Settings Page of the DJI Pilot app.
(7) Calibrate the compass by tapping the Aircraft Status Bar in the app and selecting 'Calibrate'. Then follow the on-screen instructions.
(8) Attach the propellers with a black nut onto the motors with a black axis and spin them counter-clockwise to secure. Attach the propellers with a gray nut onto the motors with a gray axis and spin them clockwise to secure.

- Be sure to match all the propellers to motors with the correct colors and tighten by hand before flying.
- If you wish to record photos or videos, insert a Micro-SD card into the Camera's Micro-SD Card Slot.
- The Flight Mode Switch is locked in P Mode by default. Refer to the User Manual to learn how to unlock the switch and change to other modes.
- When not in P mode, the Phantom 3 Advanced will only maintain altitude, not position, and will drift with wind or user input. Return to Home is not available in F mode.

## 8. Flight

## Safe to Fly ( GPS )

Before taking off, make sure the Aircraft Status Bar in the DJI Pilot app indicates 'Safe to Fly (GPS)' or 'Safe to fly (non-GPS)' if flying indoors.

## - Auto Takeoff and Landing:

Your Phantom 3 Advanced can automatically takeoff and land at the tap of a button in the Camera screen of the DJI Pilot app.

Tap and slide to confirm automatic landing.
The aircraft will automatically land.

## －Manual Takeoff and Landing（Stick configurations are for MODE 2）：

Start the motors by pulling both control sticks to the bottom inside（or outside）corners．Release the sticks once the motors start．Slowly push the left stick（throttle stick）up to takeoff．

Start／Stop the motors
Left stick up（Slowly）

To land，gently pull the left stick（throttle stick） down to lower the aircraft until it touches the ground．Then pull both sticks to the bottom inside corners to stop the motors．

Left stick down（Slowly）

－Never stop the motors mid－flight，otherwise the aircraft will crash．Only stop the motors when on the ground or as required in emergency situations to reduce the risk of damage or injury．
－You cannot takeoff if the Intelligent Flight Battery is not sufficiently charged and the Critical Low Battery Warning is active．
－The Intelligent Flight Battery must warm up if the outside temperature is low．A warning will appear in the DJI Pilot app in this scenario．
－Once spinning，the rotating propellers can be dangerous．Do not start the motors when there are people nearby and always fly in a wide－open area．
－Power off your Phantom 3 Advanced before switching off the Remote Controller after landing．

## －Return to Home：

1．Press and hold the Return to Home Button on your Remote Controller until the LED surrounding the button starts blinking white and starts beeping．Your Phantom 3 Advanced will return to the set Home Point．Press the button once to stop the procedure．

RTH Button

The app＇s RTH Button

2．The DJI Pilot app will warn you if your Phantom 3 Advanced＇s battery level falls under a certain level．This warning threshold can be set in the app．The aircraft will land immediately if the battery power reaches a critical level and the Critical Low Battery Level Warning appears．
3．Failsafe：The Phantom 3 Advanced will enter Return to Home Mode if the signal to the Remote Controller is lost．
－While returning home，you can still control your Phantom 3 Advanced＇s altitude to avoid any obstacles．

## Appendix
